| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC213161).                                                                                                                                                                                                                                                                                                                                                                            |
| OTI Disclaimer:              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u> |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                      |

| Gene Summary: | The protein encoded by this gene hydrolyzes cerebroside sulfate to cerebroside and sulfate.<br>Defects in this gene lead to metachromatic leucodystrophy (MLD), a progressive<br>demyelination disease which results in a variety of neurological symptoms and ultimately<br>death. Alternatively spliced transcript variants have been described for this gene. [provided<br>by RefSeq, Dec 2010] |
