

# Product datasheet for RC213198L3

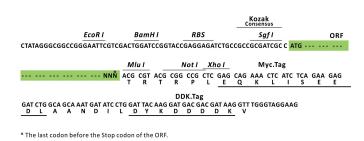

# ATAD3A (NM\_018188) Human Tagged Lenti ORF Clone

# **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	ATAD3A (NM_018188) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	ATAD3A
Synonyms:	HAYOS; PHRINL
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC213198).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I            GCG ATC GC         ATG // NNN         ACG CGT

ACCN: ORF Size: NM\_018188 1902 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	D3A (NM_018188) Human Tagged Lenti ORF Clone – RC213198L3
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Metho	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 018188.3</u>
RefSeq Size:	2656 bp
RefSeq ORF:	1905 bp
Locus ID:	55210
UniProt ID:	<u>Q9NVI7</u>
Cytogenetics:	1p36.33
Domains:	ΑΑΑ, ΑΑΑ
MW:	71.8 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2024 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### STAD3A (NM\_018188) Human Tagged Lenti ORF Clone – RC213198L3

Gene Summary:This gene encodes a ubiquitously expressed mitochondrial membrane protein that<br/>contributes to mitochondrial dynamics, nucleoid organization, protein translation, cell growth,<br/>and cholesterol metabolism. This gene is a member of the ATPase family AAA-domain<br/>containing 3 gene family which, in humans, includes two other paralogs. Naturally occurring<br/>mutations in this gene are associated with distinct neurological syndromes including Harel-<br/>Yoon syndrome. High-level expression of this gene is associated with poor survival in breast<br/>cancer patients. A homozygous knockout of the orthologous gene in mice results in<br/>embryonic lethality at day 7.5 due to growth retardation and defective development of the<br/>trophoblast lineage. Alternative splicing results in multiple transcript variants. [provided by<br/>RefSeq, Feb 2017]
