<b>ORIGENE</b> TrkC (NTRK3) (NM_002530) Human Tagged ORF Clone Lentiviral Particle – RC213333L3V	
Protein Pathways:	Neurotrophin signaling pathway
MW:	92.8 kDa
Gene Summary:	This gene encodes a member of the neurotrophic tyrosine receptor kinase (NTRK) family. This kinase is a membrane-bound receptor that, upon neurotrophin binding, phosphorylates itself and members of the MAPK pathway. Signalling through this kinase leads to cell differentiation and may play a role in the development of proprioceptive neurons that sense body position. Mutations in this gene have been associated with medulloblastomas, secretory breast carcinomas and other cancers. Several transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2011]
