|                              | Sgf I         ORF         Mlu I            GCG ATC GCC         ATG// NNÑ         ACG CGT |

ACCN: ORF Size: NM\_005633 3999 bp

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

| SOS1 (NM_005633) Human Tagged Lenti ORF Clone – RC213531L3 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| OTI Disclaimer:                                            | Due to the inherent nature of this plasmid, standard methods to replicate additional amounts<br>of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore,<br>OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts<br>of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a<br>reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by<br>calling 301.340.3188 option 3 for pricing and delivery.                                                                                                   |
|                                                            | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>                                                                                                                                                                                                            |
| OTI Annotation:                                            | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Components:                                                | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Reconstitution Me                                          | <ul> <li>thod: 1. Centrifuge at 5,000xg for 5min.</li> <li>2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>3. Close the tube and incubate for 10 minutes at room temperature.</li> <li>4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ul>                                                                                                                                                      |

Gene Summary:This gene encodes a protein that is a guanine nucleotide exchange factor for RAS proteins,<br/>membrane proteins that bind guanine nucleotides and participate in signal transduction<br/>pathways. GTP binding activates and GTP hydrolysis inactivates RAS proteins. The product of<br/>this gene may regulate RAS proteins by facilitating the exchange of GTP for GDP. Mutations in<br/>this gene are associated with gingival fibromatosis 1 and Noonan syndrome type 4. [provided<br/>by RefSeq, Jul 2008]
