THSD7A (NM_015204) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: THSD7A (NM_015204) Human Tagged Lenti ORF Clone

Tag: mGFP

Mammalian Cell None

Selection:

Symbol:

THSD7A

Vector:pLenti-C-mGFP (PS100071)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of the ORF insert

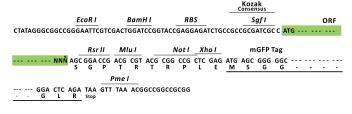

Sequence:

The ORF insert of this clone is exactly the same as(RC213616).

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

* The last codon before the Stop codon of the ORF.

ACCN: NM_015204

ORF Size: 4971 bp

THSD7A (NM_015204) Human Tagged Lenti ORF Clone - RC213616L2

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 015204.1</u>

 RefSeq Size:
 6487 bp

 RefSeq ORF:
 4974 bp

 Locus ID:
 221981

 UniProt ID:
 Q9UPZ6

 Cytogenetics:
 7p21.3

Protein Families: Transmembrane

MW: 185.2 kDa

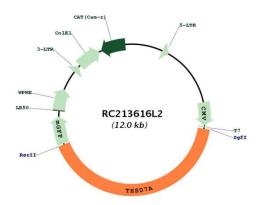

Gene Summary: The protein encoded by this gene is found almost exclusively in endothelial cells from

placenta and umbilical cord. The encoded protein appears to interact with alpha(V)beta(3) integrin and paxillin to inhibit endothelial cell migration and tube formation. This protein may be involved in cytoskeletal organization. Variations in this gene may be associated with low

bone mineral density in osteoporosis. [provided by RefSeq, Aug 2010]
