Product datasheet for RC213636L4V

OR10J3 (NM_001004467) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	OR10J3 (NM_001004467) Human Tagged ORF Clone Lentiviral Particle
Symbol:	OR10J3
Synonyms:	OR1-25; OR10J3P
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-mGFP-P2A-Puro (PS100093)
Tag:	mGFP
ACCN:	NM_001004467
ORF Size:	987 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC213636).
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	<u>NM 001004467.1, NP 001004467.1</u>
RefSeq Size:	990 bp
RefSeq ORF:	990 bp
Locus ID:	441911
UniProt ID:	Q5JRS4
Cytogenetics:	1q23.2
Protein Families:	Transmembrane
Protein Pathways:	Olfactory transduction

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

	OR10J3 (NM_001004467) Human Tagged ORF Clone Lentiviral Particle – RC213636L4V
MW:	36.4 kDa
Gene Summary:	Olfactory receptors interact with odorant molecules in the nose, to initiate a neuronal response that triggers the perception of a smell. The olfactory receptor proteins are members of a large family of G-protein-coupled receptors (GPCR) arising from single coding-exon genes. Olfactory receptors share a 7-transmembrane domain structure with many neurotransmitter and hormone receptors and are responsible for the recognition and G protein-mediated transduction of odorant signals. The olfactory receptor gene family is the largest in the genome. The nomenclature assigned to the olfactory receptor genes and proteins for this organism is independent of other organisms. This gene is considered a pseudogene because the encoded protein is truncated and missing the last transmembrane domain in several mammals.[provided by RefSeq, Jun 2021]
