	Epsin 2 (EPN2) (NM_014964) Human Tagged ORF Clone Lentiviral Particle – RC213652L3V
MW:	68.3 kDa
Gene Summary:	This gene encodes a protein which interacts with clathrin and adaptor-related protein complex 2, alpha 1 subunit. The protein is found in a brain-derived clathrin-coated vesicle fraction and localizes to the peri-Golgi region and the cell periphery. The protein is thought to be involved in clathrin-mediated endocytosis. Alternate splicing of this gene results in multiple transcript variants encoding different isoforms.
