PAPOLG (NM_022894) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PAPOLG (NM_022894) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: PAPOLG

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide

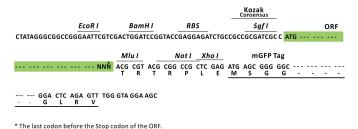

The ORF insert of this clone is exactly the same as(RC213918).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

ACCN: NM_022894

ORF Size: 2208 bp

PAPOLG (NM_022894) Human Tagged Lenti ORF Clone - RC213918L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 022894.2</u>

 RefSeq Size:
 7386 bp

 RefSeq ORF:
 2211 bp

 Locus ID:
 64895

 UniProt ID:
 Q9BWT3

Cytogenetics: 2p16.1

Domains: NTP_transf_2, PAP_RNA-bind, PAP_central

RNA degradation

Protein Families: Transcription Factors

MW: 82.8 kDa

Protein Pathways:

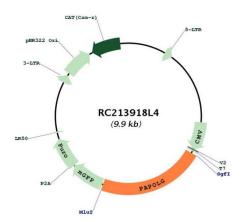

Gene Summary: This gene encodes a member of the poly(A) polymerase family which catalyzes template-

independent extension of the 3' end of a DNA/RNA strand. This enzyme shares 60% identity to the well characterized poly(A) polymerase II (PAPII) at the amino acid level. These two enzymes have similar organization of structural and functional domains. This enzyme is exclusively localized in the nucleus and exhibits both nonspecific and CPSF (cleavage and polyadenylation specificity factor)/AAUAAA-dependent polyadenylation activity. This gene is located on chromosome 2 in contrast to the PAPII gene, which is located on chromosome 14.
