GRAF (ARHGAP26) (NM_015071) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: GRAF (ARHGAP26) (NM_015071) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: GRAF

Synonyms: GRAF; GRAF1; OPHN1L; OPHN1L1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC213996).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_015071

ORF Size: 2442 bp

GRAF (ARHGAP26) (NM_015071) Human Tagged Lenti ORF Clone - RC213996L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 015071.2</u>

RefSeq Size: 6518 bp
RefSeq ORF: 2445 bp
Locus ID: 23092
UniProt ID: Q9UNA1
Cytogenetics: 5q31.3

Domains: RhoGAP, SH3, PH

Protein Families: Druggable Genome

MW: 92.1 kDa

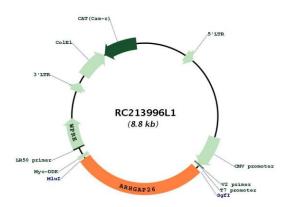

Gene Summary: Interaction of a cell with the extracellular matrix triggers integrin cell surface receptors to

begin signaling cascades that regulate the organization of the actin-cytoskeleton. One of the proteins involved in these cascades is focal adhesion kinase. The protein encoded by this gene is a GTPase activating protein that binds to focal adhesion kinase and mediates the activity of the GTP binding proteins RhoA and Cdc42. Defects in this gene are a cause of juvenile myelomonocytic leukemia (JMML). Multiple transcript variants encoding different

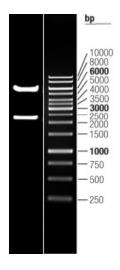

isoforms have been found for this gene. [provided by RefSeq, Mar 2017]
