

# Product datasheet for RC214045L3

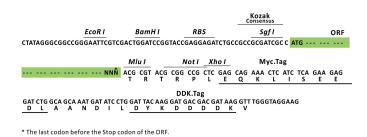

### ZFX (NM\_003410) Human Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	ZFX (NM_003410) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	ZFX
Synonyms:	ZNF926
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC214045).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf I         ORF         Mlu I            GCG ATC GC         ATG // NNN         ACG CGT

 ACCN:
 NM\_003410

 ORF Size:
 2415 bp

## **GRIGENE** ZFX (NM\_003410) Human Tagged Lenti ORF Clone - RC214045L3

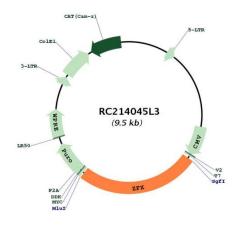

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through
	naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 003410.2</u>
RefSeq Size:	5811 bp
RefSeq ORF:	2418 bp
Locus ID:	7543
UniProt ID:	<u>P17010</u>
Cytogenetics:	Xp22.11
Domains:	Zfx_Zfy_act, zf-C2H2
Protein Families:	Transcription Factors
MW:	90.3 kDa

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2023 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

### SFX (NM\_003410) Human Tagged Lenti ORF Clone – RC214045L3

Gene Summary:This gene on the X chromosome is structurally similar to a related gene on the Y<br/>chromosome. It encodes a member of the krueppel C2H2-type zinc-finger protein family. The<br/>full-length protein contains an acidic transcriptional activation domain (AD), a nuclear<br/>localization sequence (NLS) and a DNA binding domain (DBD) consisting of 13 C2H2-type zinc<br/>fingers. Studies in mouse embryonic and adult hematopoietic stem cells showed that this<br/>gene was required as a transcriptional regulator for self-renewal of both stem cell types, but<br/>it was dispensable for growth and differentiation of their progeny. Multiple alternatively<br/>spliced transcript variants encoding different isoforms have been identified, but the full-<br/>length nature of some variants has not been determined. [provided by RefSeq, May 2010]
