

# Product datasheet for RC214069L1

## CBL (NM\_005188) Human Tagged Lenti ORF Clone

### **Product data:**

#### OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Product Type:	Expression Plasmids
Product Name:	CBL (NM_005188) Human Tagged Lenti ORF Clone
Tag:	Myc-DDK
Symbol:	CBL
Synonyms:	C-CBL; CBL2; FRA11B; NSLL; RNF55
Mammalian Cell Selection:	None
Vector:	pLenti-C-Myc-DDK (PS100064)
E. coli Selection:	Chloramphenicol (34 ug/mL)
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC214069).
<b>Restriction Sites:</b>	Sgfl-Mlul
Cloning Scheme:	
	Cloning sites used for ORF Shuttling:
	Sgf1         ORF         Mlu I            GCG ATC GC         ATG// NNN         ACG CGT

\* The last codon before the Stop codon of the ORF.

ACCN: ORF Size: NM\_005188 2718 bp

# **GRIGENE** CBL (NM\_005188) Human Tagged Lenti ORF Clone – RC214069L1

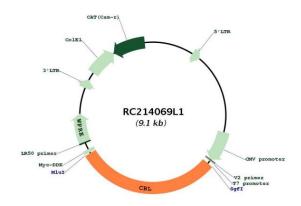

OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>
RefSeq:	<u>NM 005188.2</u>
RefSeq Size:	11242 bp
RefSeq ORF:	2721 bp
Locus ID:	867
UniProt ID:	<u>P22681</u>
Cytogenetics:	11q23.3
Domains:	UBA, RING, Cbl_N
Protein Families:	Druggable Genome, Transcription Factors
Protein Pathways:	Chronic myeloid leukemia, Endocytosis, ErbB signaling pathway, Insulin signaling pathway, Jak-STAT signaling pathway, Pathways in cancer, T cell receptor signaling pathway, Ubiquitin mediated proteolysis
MW:	99.5 kDa

#### Scale CBL (NM\_005188) Human Tagged Lenti ORF Clone – RC214069L1

# Gene Summary:This gene is a proto-oncogene that encodes a RING finger E3 ubiquitin ligase. The encoded<br/>protein is one of the enzymes required for targeting substrates for degradation by the<br/>proteasome. This protein mediates the transfer of ubiquitin from ubiquitin conjugating<br/>enzymes (E2) to specific substrates. This protein also contains an N-terminal phosphotyrosine<br/>binding domain that allows it to interact with numerous tyrosine-phosphorylated substrates<br/>and target them for proteasome degradation. As such it functions as a negative regulator of<br/>many signal transduction pathways. This gene has been found to be mutated or translocated<br/>in many cancers including acute myeloid leukaemia, and expansion of CGG repeats in the 5'<br/>UTR has been associated with Jacobsen syndrome. Mutations in this gene are also the cause<br/>of Noonan syndrome-like disorder. [provided by RefSeq, Jul 2016]
