| Product Type:                | Expression Plasmids  |
|------------------------------|--|
| Product Name:                | PRMT1 (NM_198319) Human Tagged Lenti ORF Clone   |
| Tag:                         | mGFP   |
| Symbol:                      | PRMT1  |
| Synonyms:                    | 6720434D09Rik; ANM1; arginine N-methyltransferase 1; AW214366; HCP1; heterogeneous<br>nuclear ribonucleoproteins methyltransferase-like 2; HRMT1L2; Hrmt1l2; IR1B4; Mrmt1;<br>OTTMUSP00000022387; protein arginine N-methyltransferase 1 |
| Mammalian Cell<br>Selection: | None   |
| Vector:                      | pLenti-C-mGFP (PS100071)   |
| E. coli Selection:           | Chloramphenicol (34 ug/mL)   |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC214074).   |
| <b>Restriction Sites:</b>    | Sgfl-Mlul  |
| Cloning Scheme:              | Cloning sites used for ORF Shuttling:          Sgf I       ORF       Mlu I          GCG ATC GCC       ATG // NNN       ACG CGT   |

|                        | (NM_198319) Human Tagged Lenti ORF Clone – RC214074L2   |
|------------------------|---|
| ORF Size:              | 1041 bp   |
| OTI Disclaimer:        | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>   |
| OTI Annotation:        | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.  |
| Components:            | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).  |
| Reconstitution Method: | <ol> <li>Centrifuge at 5,000xg for 5min.</li> <li>Carefully open the tube and add 100ul of sterile water to dissolve the DNA.</li> <li>Close the tube and incubate for 10 minutes at room temperature.</li> <li>Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.</li> <li>Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.</li> </ol>  |
| RefSeq:                | <u>NM 198319.1</u>  |
| RefSeq Size:           | 1435 bp   |
| RefSeq ORF:            | 1043 bp   |
| Locus ID:              | 3276  |
| Cytogenetics:          | 19q13.33  |
| MW:                    | 42.3 kDa  |
| Gene Summary:          | This gene encodes a member of the protein arginine N-methyltransferase (PRMT) family.<br>Post-translational modification of target proteins by PRMTs plays an important regulatory<br>role in many biological processes, whereby PRMTs methylate arginine residues by<br>transferring methyl groups from S-adenosyl-L-methionine to terminal guanidino nitrogen<br>atoms. The encoded protein is a type I PRMT and is responsible for the majority of cellular<br>arginine methylation activity. Increased expression of this gene may play a role in many types<br>of cancer. Alternatively spliced transcript variants encoding multiple isoforms have been |

observed for this gene, and a pseudogene of this gene is located on the long arm of
