Zyxin (ZYX) (NM_003461) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Zyxin (ZYX) (NM_003461) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Zyxin

Synonyms: ESP-2; HED-2

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC214079).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_003461

ORF Size: 1716 bp

Zyxin (ZYX) (NM_003461) Human Tagged Lenti ORF Clone - RC214079L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 003461.4</u>

RefSeq Size: 2325 bp RefSeq ORF: 1719 bp

Locus ID: 7791

 UniProt ID:
 Q15942

 Cytogenetics:
 7q34

Domains: LIM

Protein Pathways: Focal adhesion

MW: 61.1 kDa

Gene Summary: Focal adhesions are actin-rich structures that enable cells to adhere to the extracellular

matrix and at which protein complexes involved in signal transduction assemble. Zyxin is a zinc-binding phosphoprotein that concentrates at focal adhesions and along the actin cytoskeleton. Zyxin has an N-terminal proline-rich domain and three LIM domains in its C-terminal half. The proline-rich domain may interact with SH3 domains of proteins involved in signal transduction pathways while the LIM domains are likely involved in protein-protein binding. Zyxin may function as a messenger in the signal transduction pathway that mediates adhesion-stimulated changes in gene expression and may modulate the cytoskeletal

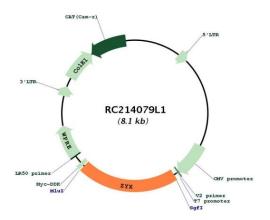

adnesion-stimulated changes in gene expression and may modulate the cytoskeletal

organization of actin bundles. Alternative splicing results in multiple transcript variants that

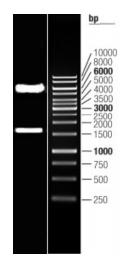

encode the same isoform. [provided by RefSeq, Jul 2008]
