## Muscarinic Acetylcholine Receptor M4 (CHRM4) (NM\_000741) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Muscarinic Acetylcholine Receptor M4 (CHRM4) (NM\_000741) Human Tagged ORF Clone

Lentiviral Particle

Symbol: Muscarinic Acetylcholine Receptor M4

Synonyms: HM4; M4R

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_000741 **ORF Size:** 1437 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC214127).

Sequence:
OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 000741.2</u>

 RefSeq Size:
 1468 bp

 RefSeq ORF:
 1440 bp

 Locus ID:
 1132

 UniProt ID:
 P08173

Cytogenetics: 11p11.2

**Protein Families:** Druggable Genome

## Muscarinic Acetylcholine Receptor M4 (CHRM4) (NM\_000741) Human Tagged ORF Clone Lentiviral Particle – RC214127L2V

**Protein Pathways:** Neuroactive ligand-receptor interaction, Regulation of actin cytoskeleton

MW: 52.9 kDa

**Gene Summary:** The muscarinic cholinergic receptors belong to a larger family of G protein-coupled receptors.

The functional diversity of these receptors is defined by the binding of acetylcholine and includes cellular responses such as adenylate cyclase inhibition, phosphoinositide degeneration, and potassium channel mediation. Muscarinic receptors influence many

effects of acetylcholine in the central and peripheral nervous system. The clinical implications of this receptor are unknown; however, mouse studies link its function to adenylyl cyclase

inhibition. [provided by RefSeq, Jul 2008]
