## Cardiac Troponin T (TNNT2) (NM\_000364) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: Cardiac Troponin T (TNNT2) (NM\_000364) Human Tagged ORF Clone Lentiviral Particle

Symbol: Cardiac Troponin T

Synonyms: CMD1D; CMH2; CMPD2; cTnT; LVNC6; RCM3; TnTC

**Mammalian Cell** 

Selection:

Puromycin

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK
ACCN: NM 000364

ORF Size: 885 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC214180).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 000364.2</u>

 RefSeq Size:
 1153 bp

 RefSeq ORF:
 888 bp

 Locus ID:
 7139

 UniProt ID:
 P45379

 Cytogenetics:
 1q32.1

**Domains:** Troponin

**Protein Families:** Druggable Genome

## Cardiac Troponin T (TNNT2) (NM\_000364) Human Tagged ORF Clone Lentiviral Particle – RC214180L3V

Protein Pathways: Cardiac muscle contraction, Dilated cardiomyopathy, Hypertrophic cardiomyopathy (HCM)

MW: 35.4 kDa

**Gene Summary:** The protein encoded by this gene is the tropomyosin-binding subunit of the troponin

complex, which is located on the thin filament of striated muscles and regulates muscle contraction in response to alterations in intracellular calcium ion concentration. Mutations in this gene have been associated with familial hypertrophic cardiomyopathy as well as with dilated cardiomyopathy. Transcripts for this gene undergo alternative splicing that results in many tissue-specific isoforms, however, the full-length nature of some of these variants has

not yet been determined. [provided by RefSeq, Jul 2008]
