

Product datasheet for RC214199L1

COPA (NM_001098398) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids Product Name: COPA (NM_001098398) Human Tagged Lenti ORF Clone Tag: Myc-DDK Symbol: COPA Synonyms: AILJK; alpha-COP; HEP-COP **Mammalian Cell** None Selection: Vector: pLenti-C-Myc-DDK (PS100064) E. coli Selection: Chloramphenicol (34 ug/mL) The ORF insert of this clone is exactly the same as(RC214199). **ORF** Nucleotide Sequence: **Restriction Sites:** Sgfl-Mlul **Cloning Scheme:** Cloning sites used for ORF Shuttling: ORF Sqf I Mlu I --- GCG ATC GC C ATG --- //--- NNN ACG CGT ---

ACCN: ORF Size: Phone: +1-888-267-4436

3699 bp

	OPA (NM_001098398) Human Tagged Lenti ORF Clone – RC214199L1
OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Met	 hod: 1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 001098398.1, NP 001091868.1</u>
RefSeq Size:	5666 bp
RefSeq ORF:	3702 bp
Locus ID:	1314
UniProt ID:	<u>P53621</u>
Cytogenetics:	1q23.2
MW:	139.1 kDa

COPA (NM_001098398) Human Tagged Lenti ORF Clone – RC214199L1

Gene Summary:In eukaryotic cells, protein transport between the endoplasmic reticulum and Golgi
compartments is mediated in part by non-clathrin-coated vesicular coat proteins (COPs).
Seven coat proteins have been identified, and they represent subunits of a complex known as
coatomer. The subunits are designated alpha-COP, beta-COP, beta-prime-COP, gamma-COP,
delta-COP, epsilon-COP, and zeta-COP. The alpha-COP, encoded by COPA, shares high
sequence similarity with RET1P, the alpha subunit of the coatomer complex in yeast. Also, the
N-terminal 25 amino acids of alpha-COP encode the bioactive peptide, xenin, which
stimulates exocrine pancreatic secretion and may act as a gastrointestinal hormone.
Alternative splicing results in multiple splice forms encoding distinct isoforms. [provided by
RefSeq, Jul 2008]
