# Dehydrodolichyl Diphosphate Synthase (DHDDS) (NM\_205861) Human Tagged ORF Clone Lentiviral Particle

#### **Product data:**

**Product Type:** Lentiviral Particles

**Product Name:** Dehydrodolichyl Diphosphate Synthase (DHDDS) (NM\_205861) Human Tagged ORF Clone

Lentiviral Particle

Symbol: Dehydrodolichyl Diphosphate Synthase
Synonyms: CIT; CPT; DEDSM; DS; hCIT; HDS; RP59

**Mammalian Cell** 

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_205861

ORF Size: 999 bp

**ORF Nucleotide** 

Sequence:

The ORF insert of this clone is exactly the same as(RC214239).

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 205861.1</u>

 RefSeq Size:
 3312 bp

 RefSeq ORF:
 1002 bp

 Locus ID:
 79947

 UniProt ID:
 086SQ9

 Cytogenetics:
 1p36.11

**Protein Pathways:** Terpenoid backbone biosynthesis

## Dehydrodolichyl Diphosphate Synthase (DHDDS) (NM\_205861) Human Tagged ORF Clone Lentiviral Particle – RC214239L4V

MW: 38.5 kDa

**Gene Summary:** The protein encoded by this gene catalyzes cis-prenyl chain elongation to produce the

polyprenyl backbone of dolichol, a glycosyl carrier lipid required for the biosynthesis of several classes of glycoproteins. Mutations in this gene are associated with retinitis

pigmentosa type 59. Alternatively spliced transcript variants encoding different isoforms have

been described for this gene. [provided by RefSeq, Aug 2011]
