## ZHX1 (NM\_001017926) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: ZHX1 (NM 001017926) Human Tagged ORF Clone Lentiviral Particle

Symbol: ZHX1

Mammalian Cell Puromycin

Selection:

Vector:

pLenti-C-Myc-DDK-P2A-Puro (PS100092)

Tag: Myc-DDK

**ACCN:** NM\_001017926

ORF Size: 2619 bp

**ORF Nucleotide** 

OTI Disclaimer:

**Cytogenetics:** 

The ORF insert of this clone is exactly the same as(RC214398).

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 001017926.1</u>

 RefSeq Size:
 5234 bp

 RefSeq ORF:
 2622 bp

 Locus ID:
 11244

 UniProt ID:
 Q9UKY1

**Protein Families:** Transcription Factors

8q24.13

**MW:** 98.1 kDa

## **Gene Summary:**

The members of the zinc fingers and homeoboxes gene family are nuclear homodimeric transcriptional repressors that interact with the A subunit of nuclear factor-Y (NF-YA) and contain two C2H2-type zinc fingers and five homeobox DNA-binding domains. This gene encodes member 1 of this gene family. In addition to forming homodimers, this protein heterodimerizes with members 2 and 3 of the zinc fingers and homeoboxes family. Alternative splicing results in multiple transcript variants. Read-through transcription also exists between this gene and the downstream chromosome 8 open reading frame 76 (C8orf76) gene. [provided by RefSeq, Feb 2011]
