MW: 73.2 kDa

Gene Summary:This gene encodes a Rho-GTPase activating protein, which is specific for the small GTPase
family member Rac. Binding of the encoded protein by filamin A targets it to sites of
membrane protrusion, where it antognizes Rac. This results in suppression of lamellae
formation and promotion of retraction to regulate cell polarity. Alternative splicing results in
multiple transcript variants. [provided by RefSeq, Sep 2016]
