

Product datasheet for RC214664L2

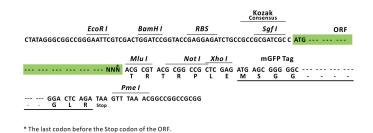

DAB1 (NM_021080) Human Tagged Lenti ORF Clone

Product data:

OriGene Technologies, Inc.

9620 Medical Center Drive, Ste 200 Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com CN: techsupport@origene.cn

Expression Plasmids
DAB1 (NM_021080) Human Tagged Lenti ORF Clone
mGFP
DAB1
SCA37
None
pLenti-C-mGFP (PS100071)
Chloramphenicol (34 ug/mL)
The ORF insert of this clone is exactly the same as(RC214664).
Sgfl-Mlul
Cloning sites used for ORF Shuttling:
Sgf i ORF Miu i
<mark>GCG ATC GC</mark> C <mark>ATG // NNN</mark> <u>ACG CGT</u>

ACCN: ORF Size: NM_021080 1665 bp

ORIGENE DAB1 (NM_021080) Human Tagged Lenti ORF Clone – RC214664L2		
OTI Disclaimer:	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>	
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.	
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).	
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C. 	
Note:	Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um filter is required.	
RefSeq:	<u>NM 021080.3</u>	
RefSeq Size:	2580 bp	
RefSeq ORF:	1668 bp	
Locus ID:	1600	
UniProt ID:	<u>075553</u>	
Cytogenetics:	1p32.2	
Domains:	PID	
MW:	59.8 kDa	
Gene Summary:	The laminar organization of multiple neuronal types in the cerebral cortex is required for normal cognitive function. In mice, the disabled-1 gene plays a central role in brain development, directing the migration of cortical neurons past previously formed neurons to reach their proper layer. This gene is similar to disabled-1, and the protein encoded by this gene is thought to be a signal transducer that interacts with protein kinase pathways to	

regulate neuronal positioning in the developing brain. [provided by RefSeq, Jan 2017]
