CDH20 (NM_031891) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: CDH20 (NM 031891) Human Tagged Lenti ORF Clone

Tag: mGFP Symbol: CDH20

Synonyms: Cdh7; CDH7L3

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC214769).

Sgfl-Mlul

Sequence:

nce:

Restriction Sites: Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_031891

ORF Size: 2403 bp

CDH20 (NM_031891) Human Tagged Lenti ORF Clone - RC214769L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 031891.2</u>

RefSeq Size: 2855 bp
RefSeq ORF: 2406 bp
Locus ID: 28316
UniProt ID: Q9HBT6
Cytogenetics: 18q21.33

Domains: Cadherin_C_term, CA

Protein Families: Druggable Genome

MW: 85.1 kDa

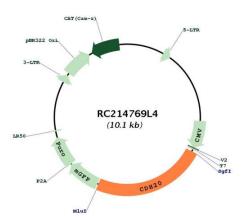

Gene Summary: This gene is a type II classical cadherin from the cadherin superfamily and one of three

cadherin 7-like genes located in a cluster on chromosome 18. The encoded membrane protein is a calcium dependent cell-cell adhesion glycoprotein comprised of five extracellular cadherin repeats, a transmembrane region and a highly conserved cytoplasmic tail. Type II (atypical) cadherins are defined based on their lack of a HAV cell adhesion recognition sequence specific to type I cadherins. Since disturbance of intracellular adhesion is a prerequisite for invasion and metastasis of tumor cells, cadherins are considered prime

candidates for tumor suppressor genes. [provided by RefSeq, Jul 2008]
