MAML1 (NM_014757) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: MAML1 (NM_014757) Human Tagged Lenti ORF Clone

Tag: mGFP

Symbol: Mam-1; Mam1 Synonyms:

Mammalian Cell Puromycin

Selection:

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

MAML1

E. coli Selection: Chloramphenicol (34 ug/mL)

The ORF insert of this clone is exactly the same as(RC214790). **ORF Nucleotide**

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_014757

ORF Size: 3048 bp

MAML1 (NM_014757) Human Tagged Lenti ORF Clone - RC214790L4

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 014757.3</u>

Cytogenetics: 5q35.3

Protein Pathways: Notch signaling pathway

MW: 107.9 kDa

Gene Summary: This protein is the human homolog of mastermind, a Drosophila protein that plays a role in

the Notch signaling pathway involved in cell-fate determination. There is in vitro evidence that

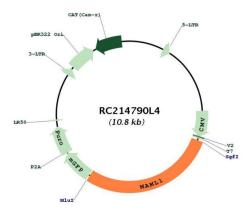

the human homolog forms a complex with the intracellular portion of human Notch

receptors and can increase expression of a Notch-induced gene. This evidence supports its proposed function as a transcriptional co-activator in the Notch signaling pathway. [provided

by RefSeq, Jul 2008]
