## MAGED1 (NM\_006986) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** MAGED1 (NM\_006986) Human Tagged ORF Clone Lentiviral Particle

Symbol: MAGED1

Synonyms: DLXIN-1; NRAGE

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_006986 **ORF Size:** 2334 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC214851).

Sequence:

**Domains:** 

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 006986.3

 RefSeq Size:
 2760 bp

 RefSeq ORF:
 2337 bp

 Locus ID:
 9500

 UniProt ID:
 Q9Y5V3

 Cytogenetics:
 Xp11.22

**Protein Families:** Druggable Genome

MAGE

## MAGED1 (NM\_006986) Human Tagged ORF Clone Lentiviral Particle - RC214851L4V

**Protein Pathways:** Neurotrophin signaling pathway

MW: 86 kDa

Gene Summary: This gene is a member of the melanoma antigen gene (MAGE) family. Most of the genes of

this family encode tumor specific antigens that are not expressed in normal adult tissues except testis. Although the protein encoded by this gene shares strong homology with members of the MAGE family, it is expressed in almost all normal adult tissues. This gene has been demonstrated to be involved in the p75 neurotrophin receptor mediated programmed cell death pathway. Three transcript variants encoding two different isoforms have been

found for this gene. [provided by RefSeq, Jul 2008]
