## L Kynurenine Hydrolase (KYNU) (NM\_003937) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** L Kynurenine Hydrolase (KYNU) (NM\_003937) Human Tagged ORF Clone Lentiviral Particle

Symbol: L Kynurenine Hydrolase

Synonyms: KYNUU; VCRL2

**Mammalian Cell** 

None

Selection:

ACCN:

.....

NM 003937

**Vector:** pLenti-C-Myc-DDK (PS100064)

Tag: Myc-DDK

ORF Size: 1395 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC214932).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeq:** <u>NM 003937.2</u>

RefSeq Size: 1688 bp
RefSeq ORF: 1398 bp
Locus ID: 8942

UniProt ID: Q16719
Cytogenetics: 2q22.2

**Protein Families:** Protease

**Protein Pathways:** Metabolic pathways, Tryptophan metabolism

L Kynurenine Hydrolase (KYNU) (NM\_003937) Human Tagged ORF Clone Lentiviral Particle – RC214932L1V

**MW:** 52.2 kDa

**Gene Summary:** Kynureninase is a pyridoxal-5'-phosphate (pyridoxal-P) dependent enzyme that catalyzes the

cleavage of L-kynurenine and L-3-hydroxykynurenine into anthranilic and 3-hydroxyanthranilic acids, respectively. Kynureninase is involved in the biosynthesis of NAD cofactors from tryptophan through the kynurenine pathway. Alternative splicing results in

multiple transcript variants. [provided by RefSeq, Nov 2010]
