## Adenylate Kinase 1 (AK1) (NM 000476) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Adenylate Kinase 1 (AK1) (NM\_000476) Human Tagged ORF Clone Lentiviral Particle

Symbol: Adenylate Kinase 1

Synonyms: HTL-S-58j

Mammalian Cell None

Selection:

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

**ACCN:** NM\_000476

ORF Size: 582 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC215130).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: <u>NM 000476.1</u>

RefSeq Size: 2271 bp

RefSeq ORF: 585 bp Locus ID: 203

UniProt ID: P00568

Cytogenetics: 9q34.11

**Domains:** ADK

**Protein Families:** Druggable Genome

## Adenylate Kinase 1 (AK1) (NM\_000476) Human Tagged ORF Clone Lentiviral Particle – RC215130L2V

**Protein Pathways:** Metabolic pathways, Purine metabolism

MW: 21.5 kDa

Gene Summary: This gene encodes an adenylate kinase enzyme involved in energy metabolism and

homeostasis of cellular adenine nucleotide ratios in different intracellular compartments. This gene is highly expressed in skeletal muscle, brain and erythrocytes. Certain mutations in this gene resulting in a functionally inadequate enzyme are associated with a rare genetic disorder causing nonspherocytic hemolytic anemia. Alternative splicing of this gene results in multiple transcript variants encoding different isoforms. [provided by RefSeq, Dec 2015]
