### EML1 (NM\_001008707) Human Tagged Lenti ORF Clone

#### **Product data:**

**Product Type:** Expression Plasmids

Product Name: EML1 (NM 001008707) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: EML1

Synonyms: BH; ELP79; EMAP; EMAP-1; EMAPL

Mammalian Cell Puromycin

Selection:

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC215333).

Sequence:

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

 $<sup>\</sup>ensuremath{^*}$  The last codon before the Stop codon of the ORF.

**ACCN:** NM\_001008707

ORF Size: 2502 bp

#### EML1 (NM\_001008707) Human Tagged Lenti ORF Clone - RC215333L3

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 001008707.1</u>

 RefSeq Size:
 4536 bp

 RefSeq ORF:
 2505 bp

 Locus ID:
 2009

 UniProt ID:
 000423

Cytogenetics: 14q32.2

**MW:** 92 kDa

**Gene Summary:** Human echinoderm microtubule-associated protein-like is a strong candidate for the Usher

syndrome type 1A gene. Usher syndromes (USHs) are a group of genetic disorders consisting of congenital deafness, retinitis pigmentosa, and vestibular dysfunction of variable onset and severity depending on the genetic type. The disease process in USHs involves the entire brain

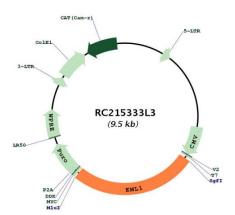

and is not limited to the posterior fossa or auditory and visual systems. The USHs are

catagorized as type I (USH1A, USH1B, USH1C, USH1D, USH1E and USH1F), type II (USH2A and USH2B) and type III (USH3). The type I is the most severe form. Gene loci responsible for these three types are all mapped. Two transcript variants encoding different isoforms have

been found for this gene. [provided by RefSeq, Jul 2008]
