AGL (NM_000028) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: AGL (NM 000028) Human Tagged ORF Clone Lentiviral Particle

Symbol: AGL
Synonyms: GDE

Mammalian Cell Selection:

None

Vector: pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM_000028

 ORF Size:
 4596 bp

ORF Nucleotide

The ORF insert of this clone is exactly the same as(RC215495).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeg: NM 000028.1

 RefSeq Size:
 7445 bp

 RefSeq ORF:
 4599 bp

 Locus ID:
 178

 UniProt ID:
 P35573

Cytogenetics: 1p21.2

Protein Families: Druggable

Protein Pathways: Metabolic pathways, Starch and sucrose metabolism

Druggable Genome

ORÏGENE

MW: 174.6 kDa

Gene Summary: This gene encodes the glycogen debrancher enzyme which is involved in glycogen

degradation. This enzyme has two independent catalytic activities which occur at different sites on the protein: a 4-alpha-glucotransferase activity and a amylo-1,6-glucosidase activity. Mutations in this gene are associated with glycogen storage disease although a wide range of enzymatic and clinical variability occurs which may be due to tissue-specific alternative splicing. Alternatively spliced transcripts encoding different isoforms have been described.

[provided by RefSeq, Jul 2008]
