

Product datasheet for **RC215510L3V**

Laminin 5 (LAMB3) (NM_000228) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type:	Lentiviral Particles
Product Name:	Laminin 5 (LAMB3) (NM_000228) Human Tagged ORF Clone Lentiviral Particle
Symbol:	Laminin 5
Synonyms:	A11A; BM600-125KDA; LAM5; LAMNB1
Mammalian Cell Selection:	Puromycin
Vector:	pLenti-C-Myc-DDK-P2A-Puro (PS100092)
Tag:	Myc-DDK
ACCN:	NM_000228
ORF Size:	3516 bp
ORF Nucleotide Sequence:	The ORF insert of this clone is exactly the same as(RC215510).
OTI Disclaimer:	<p>Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at custsupport@origene.com or by calling 301.340.3188 option 3 for pricing and delivery.</p> <p>The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info</p>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
RefSeq:	NM_000228.2
RefSeq Size:	4093 bp
RefSeq ORF:	3519 bp

[View online >](#)

Locus ID:	3914
UniProt ID:	Q13751
Cytogenetics:	1q32.2
Protein Families:	Druggable Genome, Secreted Protein
Protein Pathways:	ECM-receptor interaction, Focal adhesion, Pathways in cancer, Small cell lung cancer
MW:	129.6 kDa
Gene Summary:	The product encoded by this gene is a laminin that belongs to a family of basement membrane proteins. This protein is a beta subunit laminin, which together with an alpha and a gamma subunit, forms laminin-5. Mutations in this gene cause epidermolysis bullosa junctional Herlitz type, and generalized atrophic benign epidermolysis bullosa, diseases that are characterized by blistering of the skin. Multiple alternatively spliced transcript variants that encode the same protein have been found for this gene. [provided by RefSeq, Jul 2008]

Product images:

[RC215510L3] was used to prepare Lentiviral particles using [TR30037] packaging kit. HEK293T cells were transduced with RC215510L3V particle to overexpress human LAMB3-Myc-DDK fusion protein.
