Glutaredoxin 2 (GLRX2) (NM_016066) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: Glutaredoxin 2 (GLRX2) (NM_016066) Human Tagged Lenti ORF Clone

Tag: Myc-DDK

Symbol: Glutaredoxin 2
Synonyms: CGI-133; GRX2

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

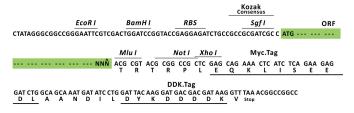

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC215566).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF.

ACCN: NM_016066

ORF Size: 495 bp

Glutaredoxin 2 (GLRX2) (NM_016066) Human Tagged Lenti ORF Clone - RC215566L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 016066.3</u>, <u>NP 057150.2</u>

 RefSeq Size:
 1170 bp

 RefSeq ORF:
 498 bp

 Locus ID:
 51022

 UniProt ID:
 Q9NS18

 Cytogenetics:
 1q31.2

Protein Families: Transcription Factors

MW: 18.5 kDa

Gene Summary: The protein encoded by this gene is a member of the glutaredoxin family of proteins, which

maintain cellular thiol homeostasis. These proteins are thiol-disulfide oxidoreductases that use a glutathione-binding site and one or two active cysteines in their active site. This gene undergoes alternative splicing to produce multiple isoforms, one of which is ubiquitously

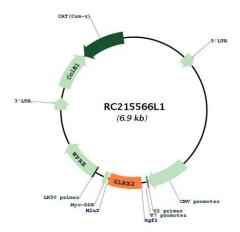

expressed and localizes to mitochondria, where it functions in mitochondrial redox

homeostasis and is important for the protection against and recovery from oxidative stress. Other isoforms, which have more restrictive expression patterns, show cytosolic and nuclear localization, and are thought to function in cellular differentiation and transformation,

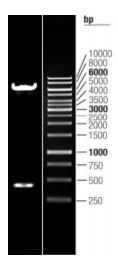

possibly with a role in tumor progression. [provided by RefSeq, Aug 2011]
