OTI Disclaimer:	Due to the inherent nature of this plasmid, standard methods to replicate additional amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements. Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA. Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence verification at a reduced cost. Please contact our customer care team at <u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery.
	The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>
OTI Annotation:	This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	 Centrifuge at 5,000xg for 5min. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. Close the tube and incubate for 10 minutes at room temperature. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM 000601.4</u>
RefSeq Size:	2820 bp
RefSeq ORF:	2187 bp
Locus ID:	3082
UniProt ID:	<u>P14210</u>
Cytogenetics:	7q21.11
Protein Families:	Adult stem cells, Druggable Genome, ES Cell Differentiation/IPS, Protease, Transmembrane
Protein Pathways:	Cytokine-cytokine receptor interaction, Focal adhesion, Melanoma, Pathways in cancer, Renal cell carcinoma

GRIGENE HGF (NM_000601) Human Tagged Lenti ORF Clone – RC215593L4

Gene Summary:This gene encodes a protein that binds to the hepatocyte growth factor receptor to regulate
cell growth, cell motility and morphogenesis in numerous cell and tissue types. Alternative
splicing results in multiple transcript variants, at least one of which encodes a preproprotein
that is proteolytically processed to generate alpha and beta chains, which form the mature
heterodimer. This protein is secreted by mesenchymal cells and acts as a multi-functional
cytokine on cells of mainly epithelial origin. This protein also plays a role in angiogenesis,
tumorogenesis, and tissue regeneration. Although the encoded protein is a member of the
peptidase S1 family of serine proteases, it lacks peptidase activity. Mutations in this gene are
associated with nonsyndromic hearing loss. [provided by RefSeq, Nov 2015]
