## **Topoisomerase I (TOP1) (NM\_003286) Human Tagged ORF Clone Lentiviral Particle**

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** Topoisomerase I (TOP1) (NM\_003286) Human Tagged ORF Clone Lentiviral Particle

Symbol: Topoisomerase I

Synonyms: TOPI

Mammalian Cell

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_003286 **ORF Size:** 2295 bp

**ORF Nucleotide** 

'

Sequence:

The ORF insert of this clone is exactly the same as(RC215658).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally accurring variations (e.g. polymorphisms), each with its own valid existence. This

naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 003286.2

 RefSeq Size:
 3734 bp

 RefSeq ORF:
 2298 bp

 Locus ID:
 7150

 UniProt ID:
 P11387

Cytogenetics: 20q12

Domains: TOPEUc

**Protein Families:** Druggable Genome

## Topoisomerase I (TOP1) (NM\_003286) Human Tagged ORF Clone Lentiviral Particle – RC215658L4V

**MW:** 90.5 kDa

**Gene Summary:** This gene encodes a DNA topoisomerase, an enzyme that controls and alters the topologic

states of DNA during transcription. This enzyme catalyzes the transient breaking and rejoining of a single strand of DNA which allows the strands to pass through one another, thus altering the topology of DNA. This gene is localized to chromosome 20 and has pseudogenes which reside on chromosomes 1 and 22. [provided by RefSeq, Jul 2008]
