Gene Summary:This gene encodes a nuclear RNA binding protein that contains a C2H2 zinc finger motif and<br/>a nuclear localization signal. This protein is associated with the nuclear matrix in<br/>perichromatin fibrils and, in neurons, localizes to the cytoplasm in association with<br/>endoplasmic reticulum ribosomes. This protein interacts with the fragile X mental retardation<br/>protein (FMRP), the tumor suppressor protein BRCA1, upregulates RNA polymerase II<br/>transcription, and is involved in box C/D snoRNP biogenesis. A pseudogene of this gene<br/>resides on chromosome 6q12. [provided by RefSeq, Feb 2012]
