

Product datasheet for **RC215788L1V**

QK1 (QKI) (NM_206855) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Product Type: | Lentiviral Particles |
| Product Name: | QK1 (QKI) (NM_206855) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | QK1 |
| Synonyms: | Hqk; hqkl; QK; QK1; QK3 |
| Mammalian Cell Selection: | None |
| Vector: | pLenti-C-Myc-DDK (PS100064) |
| Tag: | Myc-DDK |
| ACCN: | NM_206855 |
| ORF Size: | 957 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC215788). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_206855.1 |
| RefSeq Size: | 7919 bp |
| RefSeq ORF: | 960 bp |
| Locus ID: | 9444 |
| UniProt ID: | Q96PU8 |
| Cytogenetics: | 6q26 |
| MW: | 35.1 kDa |

Gene Summary:

The protein encoded by this gene is an RNA-binding protein that regulates pre-mRNA splicing, export of mRNAs from the nucleus, protein translation, and mRNA stability. The encoded protein is involved in myelination and oligodendrocyte differentiation and may play a role in schizophrenia. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Jul 2014]
