ADAMTS10 (NM_030957) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: ADAMTS10 (NM_030957) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: ADAMTS10

Synonyms: ADAM-TS10; ADAMTS-10; WMS; WMS1

Mammalian Cell None

Selection:

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC215901).

Sequence:

Restriction Sites: Sgfl-Mlul

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_030957

ORF Size: 3309 bp

ADAMTS10 (NM_030957) Human Tagged Lenti ORF Clone - RC215901L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 030957.2</u>

 RefSeq Size:
 4237 bp

 RefSeq ORF:
 3312 bp

 Locus ID:
 81794

 UniProt ID:
 Q9H324

Cytogenetics: 19p13.2

Domains: tsp_1, Reprolysin, Pep_M12B_propep

Protein Families: Druggable Genome, Secreted Protein

MW: 120.7 kDa

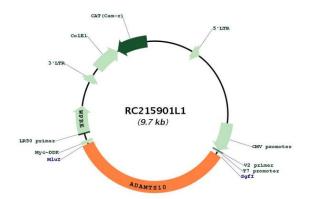

Gene Summary: This gene belongs to the ADAMTS (a disintegrin and metalloproteinase domain with

thrombospondin type-1 motifs) family of zinc-dependent proteases. ADAMTS proteases are complex secreted enzymes containing a prometalloprotease domain of the reprolysin type attached to an ancillary domain with a highly conserved structure that includes at least one thrombospondin type 1 repeat. They have been demonstrated to have important roles in connective tissue organization, coagulation, inflammation, arthritis, angiogenesis and cell migration. The product of this gene plays a major role in growth and in skin, lens, and heart development. It is also a candidate gene for autosomal recessive Weill-Marchesani syndrome.
