

Product datasheet for **RC215930L4V**

PVRL1 (NECTIN1) (NM_203286) Human Tagged ORF Clone Lentiviral Particle

Product data:

| | |
|---------------------------|--|
| Product Type: | Lentiviral Particles |
| Product Name: | PVRL1 (NECTIN1) (NM_203286) Human Tagged ORF Clone Lentiviral Particle |
| Symbol: | PVRL1 |
| Synonyms: | CD111; CLPED1; ED4; HlgR; HV1S; HVEC; nectin-1; OFC7; PRR; PRR1; PVRL1; PVRR; PVRR1; SK-12 |
| Mammalian Cell Selection: | Puromycin |
| Vector: | pLenti-C-mGFP-P2A-Puro (PS100093) |
| Tag: | mGFP |
| ACCN: | NM_203286 |
| ORF Size: | 1056 bp |
| ORF Nucleotide Sequence: | The ORF insert of this clone is exactly the same as(RC215930). |
| OTI Disclaimer: | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info |
| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene. |
| RefSeq: | NM_203286.1 |
| RefSeq Size: | 1451 bp |
| RefSeq ORF: | 1059 bp |
| Locus ID: | 5818 |
| UniProt ID: | Q15223 |
| Cytogenetics: | 11q23.3 |
| Protein Families: | Druggable Genome, ES Cell Differentiation/IPS, Transmembrane |

|--------------------------|--|
| Protein Pathways: | Adherens junction, Cell adhesion molecules (CAMs) |
| MW: | 36 kDa |
| Gene Summary: | <p>This gene encodes an adhesion protein that plays a role in the organization of adherens junctions and tight junctions in epithelial and endothelial cells. The protein is a calcium(2+)-independent cell-cell adhesion molecule that belongs to the immunoglobulin superfamily and has 3 extracellular immunoglobulin-like loops, a single transmembrane domain (in some isoforms), and a cytoplasmic region. This protein acts as a receptor for glycoprotein D (gD) of herpes simplex viruses 1 and 2 (HSV-1, HSV-2), and pseudorabies virus (PRV) and mediates viral entry into epithelial and neuronal cells. Mutations in this gene cause cleft lip and palate/ectodermal dysplasia 1 syndrome (CLPED1) as well as non-syndromic cleft lip with or without cleft palate (CL/P). Alternative splicing results in multiple transcript variants encoding proteins with distinct C-termini. [provided by RefSeq, Oct 2009]</p> |
