OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Gene Summary: Sphingomyelin synthases synthesize sphingolipids through transfer of a phosphatidyl head

group on to the primary hydroxyl of ceramide. SAMD8 is an endoplasmic reticulum (ER)

transferase that has no sphingomyelin synthase activity but can convert

phosphatidylethanolamine (PE) and ceramide to ceramide phosphoethanolamine (CPE) albeit

with low product yield. Appears to operate as a ceramide sensor to control ceramide

homeostasis in the endoplasmic reticulum rather than a converter of ceramides. Seems to be

critical for the integrity of the early secretory pathway.[UniProtKB/Swiss-Prot Function]
