	emaphorin 3E (SEMA3E) (NM_012431) Human Tagged ORF Clone Lentiviral Particle – C216038L3V	
Protein Pathwa	Axon guidance	
MW:	89 kDa	
Gene Summary	Semaphorins are a large family of conserved secreted and membrane associated pro- which possess a semaphorin (Sema) domain and a PSI domain (found in plexins, semaphorins and integrins) in the N-terminal extracellular portion. Based on sequence structural similarities, semaphorins are put into eight classes: invertebrates contain cl and 2, viruses have class V, and vertebrates contain classes 3-7. Semaphorins serve as guidance ligands via multimeric receptor complexes, some (if not all) containing plexin proteins. This gene encodes a class 4 semaphorin. This gene encodes a class 3 semap Multiple transcript variants encoding different isoforms have been found for this gene [provided by RefSeq, May 2010]	e and asses 1 s axon n horin.
