

## **Product datasheet for RC216060**

## DERL3 (NM\_198440) Human Tagged ORF Clone

## **Product data:**

**Product Type:** Expression Plasmids

Product Name: DERL3 (NM\_198440) Human Tagged ORF Clone

Tag: Myc-DDK Symbol: DERL3

Synonyms: C22orf14; derlin-3; IZP6; LLN2

Mammalian Cell Neomycin

Selection:

Vector:

pCMV6-Entry (PS100001)

E. coli Selection: Kanamycin (25 ug/mL)

ORF Nucleotide >RC216060 representing NM\_198440

Sequence: Red=Cloning site Blue=ORF Green=Tags(s)

**Restriction Sites:** Sgfl-Rsrll

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF

**ACCN:** NM\_198440

ORF Size: 615 bp

**OTI Disclaimer:** The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

**RefSeq:** NM 198440.4

RefSeq Size: 3217 bp
RefSeq ORF: 618 bp
Locus ID: 91319

**UniProt ID:** Q96Q80

Cytogenetics: 22q11.23 **Protein Families:** 

MW: 23.2 kDa

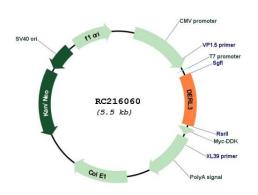

**Gene Summary:** The protein encoded by this gene belongs to the derlin family, and resides in the endoplasmic

> reticulum (ER). Proteins that are unfolded or misfolded in the ER must be refolded or degraded to maintain the homeostasis of the ER. This protein appears to be involved in the degradation of misfolded glycoproteins in the ER. Several alternatively spliced transcript variants encoding different isoforms have been identified for this gene. [provided by RefSeq,

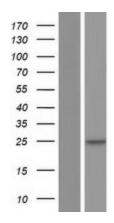

Oct 2008]
