## ST3GAL4 (NM\_006278) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

**Product Name:** ST3GAL4 (NM\_006278) Human Tagged ORF Clone Lentiviral Particle

Symbol: ST3GAL4

Synonyms: CGS23; gal-NAc6S; NANTA3; SAT3; SIAT4; SIAT4C; ST-4; ST3GalA.2; ST3GalIV; STZ

Mammalian Cell

Selection:

None

**Vector:** pLenti-C-mGFP (PS100071)

Tag: mGFP

ACCN: NM\_006278

ORF Size: 987 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC216090).

Sequence:

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 006278.1

 RefSeq Size:
 1766 bp

 RefSeq ORF:
 990 bp

 Locus ID:
 6484

 UniProt ID:
 Q11206

Cytogenetics: 11q24.2

Domains: Glyco\_transf\_29

**Protein Families:** Secreted Protein, Transmembrane

## ST3GAL4 (NM\_006278) Human Tagged ORF Clone Lentiviral Particle - RC216090L2V

**Protein Pathways:** Glycosphingolipid biosynthesis - lacto and neolacto series, Metabolic pathways

**MW:** 37.3 kDa

**Gene Summary:** This gene encodes a member of the glycosyltransferase 29 family, a group of enzymes

involved in protein glycosylation. The encoded protein is targeted to Golgi membranes but may be proteolytically processed and secreted. The gene product may also be involved in the increased expression of sialyl Lewis X antigen seen in inflammatory responses. Multiple transcript variants encoding different isoforms have been found for this gene. [provided by

RefSeq, Dec 2011]
