OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## WSTF (BAZ1B) (NM\_032408) Human Tagged ORF Clone Lentiviral Particle - RC216159L2V

**MW:** 170.7 kDa

**Gene Summary:** This gene encodes a member of the bromodomain protein family. The bromodomain is a

structural motif characteristic of proteins involved in chromatin-dependent regulation of transcription. This gene is deleted in Williams-Beuren syndrome, a developmental disorder

caused by deletion of multiple genes at 7q11.23. [provided by RefSeq, Jul 2008]
