PPAR alpha (PPARA) (NM_005036) Human Tagged Lenti ORF Clone

Product data:

Product Type: Expression Plasmids

Product Name: PPAR alpha (PPARA) (NM_005036) Human Tagged Lenti ORF Clone

Tag: Myc-DDK
Symbol: PPAR alpha

Synonyms: hPPAR; NR1C1; PPAR; PPAR-alpha; PPARalpha

Mammalian Cell None

Selection:

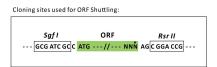

Vector:pLenti-C-Myc-DDK (PS100064)E. coli Selection:Chloramphenicol (34 ug/mL)

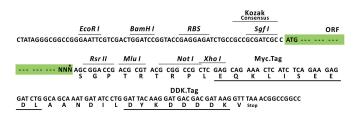

ORF Nucleotide The ORF insert of this clone is exactly the same as(RC216176).

Sequence:

Restriction Sites: Sgfl-Rsrll

Cloning Scheme:

^{*} The last codon before the Stop codon of the ORF

ACCN: NM_005036

ORF Size: 1404 bp

PPAR alpha (PPARA) (NM_005036) Human Tagged Lenti ORF Clone - RC216176L1

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

RefSeq: <u>NM 005036.4</u>

RefSeq Size: 10049 bp RefSeq ORF: 1407 bp

Locus ID: 5465

UniProt ID: Q07869
Cytogenetics: 22q13.31

Domains: HOLl, zf-C4

Protein Families: Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

Protein Pathways: Adipocytokine signaling pathway, PPAR signaling pathway

MW: 52 kDa

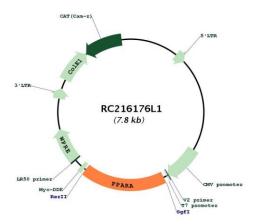

Gene Summary: Peroxisome proliferators include hypolipidemic drugs, herbicides, leukotriene antagonists,

and plasticizers; this term arises because they induce an increase in the size and number of peroxisomes. Peroxisomes are subcellular organelles found in plants and animals that contain enzymes for respiration and for cholesterol and lipid metabolism. The action of peroxisome proliferators is thought to be mediated via specific receptors, called PPARs, which belong to the steroid hormone receptor superfamily. PPARs affect the expression of target genes involved in cell proliferation, cell differentiation and in immune and inflammation responses. Three closely related subtypes (alpha, beta/delta, and gamma) have been

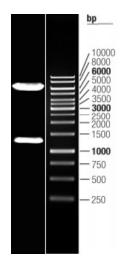

identified. This gene encodes the subtype PPAR-alpha, which is a nuclear transcription factor. Multiple alternatively spliced transcript variants have been described for this gene, although the full-length nature of only two has been determined. [provided by RefSeq, Jul 2008]
