## Melatonin Receptor 1B (MTNR1B) (NM\_005959) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

Product Type: Lentiviral Particles

**Product Name:** Melatonin Receptor 1B (MTNR1B) (NM\_005959) Human Tagged ORF Clone Lentiviral Particle

Symbol: Melatonin Receptor 1B
Synonyms: FGQTL2; MEL-1B-R; MT2

**Mammalian Cell** 

Selection:

None

**Vector:** pLenti-C-Myc-DDK (PS100064)

 Tag:
 Myc-DDK

 ACCN:
 NM\_005959

 ORF Size:
 1086 bp

**ORF Nucleotide** 

.000.5p

Sequence:

The ORF insert of this clone is exactly the same as(RC216445).

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This

clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 005959.3

 RefSeq Size:
 1662 bp

 RefSeq ORF:
 1089 bp

 Locus ID:
 4544

 UniProt ID:
 P49286

 Cytogenetics:
 11q14.3

**Protein Families:** Druggable Genome, Transmembrane

**Protein Pathways:** Neuroactive ligand-receptor interaction

Melatonin Receptor 1B (MTNR1B) (NM\_005959) Human Tagged ORF Clone Lentiviral Particle – RC216445L1V

**MW:** 40 kDa

**Gene Summary:** 

This gene encodes one of two high affinity forms of a receptor for melatonin, the primary hormone secreted by the pineal gland. This gene product is an integral membrane protein that is a G-protein coupled, 7-transmembrane receptor. It is found primarily in the retina and brain although this detection requires RT-PCR. It is thought to participate in light-dependent functions in the retina and may be involved in the neurobiological effects of melatonin. [provided by RefSeq, Jul 2008]
