CDC2L1 (CDK11B) (NM 033488) Human Tagged ORF Clone Lentiviral Particle

Product data:

Product Type: Lentiviral Particles

Product Name: CDC2L1 (CDK11B) (NM 033488) Human Tagged ORF Clone Lentiviral Particle

Symbol:

CDC2L1; CDK11; CDK11-p46; CDK11-p58; CDK11-p110; CLK-1; p58; p58CDC2L1; p58CLK-1; Synonyms:

PK58

Mammalian Cell

Selection:

Puromycin

Vector: pLenti-C-mGFP-P2A-Puro (PS100093)

mGFP Tag:

ACCN: NM 033488 ORF Size: 2211 bp

ORF Nucleotide

Sequence:

The ORF insert of this clone is exactly the same as(RC216519).

OTI Disclaimer:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

RefSeq: NM 033488.1, NP 277023.1

RefSeq Size: 2500 bp RefSeq ORF: 2213 bp Locus ID: 984

Cytogenetics: 1p36.33 Domains: pkinase

Protein Families: Druggable Genome, Transcription Factors

ORIGENE

MW:

85.7 kDa

Gene Summary:

This gene encodes a member of the serine/threonine protein kinase family. Members of this kinase family are known to be essential for eukaryotic cell cycle control. Due to a segmental duplication, this gene shares very high sequence identity with a neighboring gene. These two genes are frequently deleted or altered in neuroblastoma. The protein kinase encoded by this gene can be cleaved by caspases and may play a role in cell apoptosis. Alternative splicing results in multiple transcript variants. [provided by RefSeq, Apr 2014]
