Gene Summary:GTPase activator for the small GTPases RhoA and Cdc42 by converting them to an inactive<br/>GDP-bound state. Essential for PTKB2 regulation of cytoskeletal organization via Rho family<br/>GTPases. Inhibits PAK2 proteolytic fragment PAK-2p34 kinase activity and changes its<br/>localization from the nucleus to the perinuclear region. Stabilizes PAK-2p34 thereby<br/>increasing stimulation of cell death (By similarity).[UniProtKB/Swiss-Prot Function]
