SAH2 (ASAH2B) (NM_001079516) Human Tagged Lenti ORF Clone – RC216660L4	
The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ throu naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailin variants is recommended prior to use. <u>More info</u>	ugh
This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.	n
The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water
