OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

## PDE9A (NM\_002606) Human Tagged ORF Clone Lentiviral Particle - RC216690L2V

**Protein Pathways:** Progesterone-mediated oocyte maturation, Purine metabolism

MW: 68.3 kDa

**Gene Summary:** The protein encoded by this gene catalyzes the hydrolysis of cAMP and cGMP to their

corresponding monophosphates. The encoded protein plays a role in signal transduction by regulating the intracellular concentration of these cyclic nucleotides. Multiple transcript variants encoding several different isoforms have been found for this gene. [provided by
