OTI Disclaimer:

| OTI Annotation: | This clone was engineered to express the complete ORF with an expression tag. Expression |
| :--- | :--- |
|  | varies depending on the nature of the gene. |
| Components: | The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube |
|  | containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water). |

Reconstitution Method:

NM_014808
3162 bp
The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. More info
2. Carefully open the tube and add 100 ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000 xg ) to concentrate the liquid
at the bottom.
5. Store the suspended plasmid at $-20^{\circ} \mathrm{C}$. The DNA is stable for at least one year from date of
shipping when stored at $-20^{\circ} \mathrm{C}$.

| Gene Summary: | Functions as guanine nucleotide exchange factor that activates RAC1. May have relatively low <br> activity. Plays a role in the response to class 3 semaphorins and remodeling of the actin <br> cytoskeleton. Plays a role in TNFSF11-mediated osteoclast differentiation, especially in |
|  | podosome rearrangement and reorganization of the actin cytoskeleton. Regulates the <br> activation of ITGB3, integrin signaling and cell adhesion (By similarity). [UniProtKB/Swiss-Prot <br> Function] |
