

# **Product datasheet for RC216931L3**

# CDC14A (NM\_033312) Human Tagged Lenti ORF Clone

**Product data:** 

**Product Type:** Expression Plasmids

Tag: Myc-DDK

Symbol: CDC14A

Synonyms: cdc14; DFNB32; DFNB35; DFNB105; hCDC14

Mammalian Cell Puromycin

Selection:

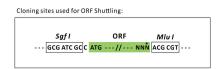

**Vector:** pLenti-C-Myc-DDK-P2A-Puro (PS100092)

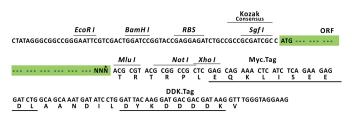

E. coli Selection: Chloramphenicol (34 ug/mL)

ORF Nucleotide Sequence: The ORF insert of this clone is exactly the same as(RC216931).

Restriction Sites: Sgfl-Mlul

**Cloning Scheme:** 

<sup>\*</sup> The last codon before the Stop codon of the ORF

**ACCN:** NM\_033312

ORF Size: 1869 bp

### CDC14A (NM\_033312) Human Tagged Lenti ORF Clone | RC216931L3

OTI Disclaimer: The molecular sequence of this clone aligns with the gene accession number as a point of

reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

OTI Annotation: This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

**Reconstitution Method:** 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Note: Plasmids are not sterile. For experiments where strict sterility is required, filtration with 0.22um

filter is required.

**RefSeq:** <u>NM\_033312.1, NP\_201569.1</u>

RefSeq Size: 2438 bp

RefSeq ORF: 1872 bp

**Locus ID:** 8556

UniProt ID: Q9UNH5

Cytogenetics: lp21.2

**Domains:** Y\_phosphatase

**Protein Families:** Druggable Genome, Phosphatase

Protein Pathways: Cell cycle

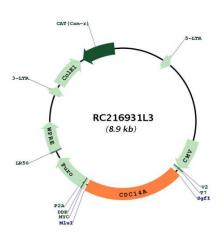

**MW:** 69.4 kDa

#### Gene Summary:

The protein encoded by this gene is a member of the dual specificity protein tyrosine phosphatase family. It is highly similar to Saccharomyces cerevisiae Cdc14, a protein tyrosine phosphatase involved in the exit of cell mitosis and initiation of DNA replication, suggesting a role in cell cycle control. This protein has been shown to interact with, and dephosphorylate tumor suppressor protein p53, and is thought to regulate the function of p53. Alternative splicing of this gene results in several transcript variants encoding distinct isoforms. [provided by RefSeq, Jul 2008]
