## Product datasheet for RC216943L3V

## OSMR (NM\_003999) Human Tagged ORF Clone Lentiviral Particle

## **Product data:**

| Product Type:                | Lentiviral Particles   |
|------------------------------|--|
| Product Name:                | OSMR (NM_003999) Human Tagged ORF Clone Lentiviral Particle  |
| Symbol:                      | OSMR   |
| Synonyms:                    | IL-31R-beta; IL-31RB; OSMRB; OSMRbeta; PLCA1   |
| Mammalian Cell<br>Selection: | Puromycin  |
| Vector:                      | pLenti-C-Myc-DDK-P2A-Puro (PS100092)   |
| Tag:                         | Myc-DDK  |
| ACCN:                        | NM_003999  |
| ORF Size:                    | 2937 bp  |
| ORF Nucleotide<br>Sequence:  | The ORF insert of this clone is exactly the same as(RC216943).   |
| OTI Disclaimer:              | Due to the inherent nature of this plasmid, standard methods to replicate additional<br>amounts of DNA in E. coli are highly likely to result in mutations and/or rearrangements.<br>Therefore, OriGene does not guarantee the capability to replicate this plasmid DNA.<br>Additional amounts of DNA can be purchased from OriGene with batch-specific, full-sequence<br>verification at a reduced cost. Please contact our customer care team at<br><u>custsupport@origene.com</u> or by calling 301.340.3188 option 3 for pricing and delivery. |
|                              | The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing variants is recommended prior to use. <u>More info</u>  |
| OTI Annotation:              | This clone was engineered to express the complete ORF with an expression tag. Expression varies depending on the nature of the gene.   |
| RefSeq:                      | <u>NM 003999.1</u>   |
| RefSeq Size:                 | 5556 bp  |
| RefSeq ORF:                  | 2940 bp  |

This product is to be used for laboratory only. Not for diagnostic or therapeutic use. ©2022 OriGene Technologies, Inc., 9620 Medical Center Drive, Ste 200, Rockville, MD 20850, US

|                   | 5MR (NM_003999) Human Tagged ORF Clone Lentiviral Particle – RC216943L3V   |
|-------------------|--|
| Locus ID:         | 9180   |
| UniProt ID:       | <u>Q99650</u>  |
| Cytogenetics:     | 5p13.1   |
| Domains:          | FN3  |
| Protein Families: | Druggable Genome, Transmembrane  |
| Protein Pathways: | Cytokine-cytokine receptor interaction, Jak-STAT signaling pathway   |
| MW:               | 110.5 kDa  |
| Gene Summary:     | This gene encodes a member of the type I cytokine receptor family. The encoded protein<br>heterodimerizes with interleukin 6 signal transducer to form the type II oncostatin M receptor<br>and with interleukin 31 receptor A to form the interleukin 31 receptor, and thus transduces<br>oncostatin M and interleukin 31 induced signaling events. Mutations in this gene have been<br>associated with familial primary localized cutaneous amyloidosis. Alternatively spliced<br>transcript variants encoding different isoforms have been found for this gene. [provided by<br>RefSeq, Dec 2009] |
