## RBFOX1 (NM\_145891) Human Tagged ORF Clone Lentiviral Particle

**Product data:** 

**Product Type:** Lentiviral Particles

Product Name: RBFOX1 (NM\_145891) Human Tagged ORF Clone Lentiviral Particle

Symbol: RBFOX<sup>2</sup>

Synonyms: 2BP1; A2BP1; FOX-1; FOX1; HRNBP1

**Mammalian Cell** 

Selection:

Puromycin

**Vector:** pLenti-C-mGFP-P2A-Puro (PS100093)

Tag: mGFP

**ACCN:** NM\_145891 **ORF Size:** 1254 bp

**ORF Nucleotide** 

The ORF insert of this clone is exactly the same as(RC216967).

OTI Disclaimer:

Sequence:

The molecular sequence of this clone aligns with the gene accession number as a point of reference only. However, individual transcript sequences of the same gene can differ through naturally occurring variations (e.g. polymorphisms), each with its own valid existence. This clone is substantially in agreement with the reference, but a complete review of all prevailing

variants is recommended prior to use. More info

**OTI Annotation:** This clone was engineered to express the complete ORF with an expression tag. Expression

varies depending on the nature of the gene.

**RefSeg:** NM 145891.1

RefSeq Size: 3262 bp
RefSeq ORF: 1257 bp
Locus ID: 54715
UniProt ID: Q9NWB1
Cytogenetics: 16p13.3
Domains: RRM

MW: 44.6 kDa

## **Gene Summary:**

The Fox-1 family of RNA-binding proteins is evolutionarily conserved, and regulates tissue-specific alternative splicing in metazoa. Fox-1 recognizes a (U)GCAUG stretch in regulated exons or in flanking introns. The protein binds to the C-terminus of ataxin-2 and may contribute to the restricted pathology of spinocerebellar ataxia type 2 (SCA2). Ataxin-2 is the product of the SCA2 gene which causes familial neurodegenerative diseases. Fox-1 and ataxin-2 are both localized in the trans-Golgi network. Several alternatively spliced transcript variants encoding different isoforms have been found for this gene. [provided by RefSeq, Nov 2011]
